HR software for people who *hate*. HR software

Your HRIS is *slow*.

Your manager can only see their own team. Time entry lives in one app, the project lives in another. The same eight hours get logged twice. **Nobody trusts either number.**

You pay for all of this.
You hate all of this.

— every services firm, every Friday afternoon

Three vendors. One *racket*.

Rippling	locks you into the suite.
Deel	locks you into contractors.
BambooHR	locks you into 2014.

Not one of them will let you read the source.

To see what they do, you have to *book a demo.*

Apparently "can I see the product before I pay for it" is a premium feature.

> *We disagreed so hard we made not-doing-that a brand value.*

$ grep -r "book a demo" pulsehr.it → 0 results

You could just *read* the source.

~/PULSE-HR — 58 S

```
$ git clone github.com/davide97g/pulse-hr
$ cd pulse-hr && bun install && bun run dev
# → localhost:5173. done.
```

≈ 58 seconds · on a 2020 MacBook · honest number

01

The whole product. On .

FSL-1.1-MIT today. Converts to plain MIT after two years. Automatic, non-negotiable.

Read every line. Run it on your own box. Fork it if we let you down.

02

Nothing behind a *sales call*.

Roadmap public. Changelog public. Prices public. **Screw-ups public.**

If you'd need to "talk to someone" to figure out if we'd work for you — that's on us. We'd rather just write it down.

03

Your data. Your infra. Your *exit*.

Self-host on Docker, Helm or Terraform. Export everything in a clean format, any time, without asking.

Leaving Pulse is the easiest thing it does. That's on purpose.

04

Built by the *haters*.

Two devs in Milan. **No BDRs. No "customer success team". No product managers.**

Just commits, a public roadmap, and pull requests from people who — turns out — also hate their HR software.

→ YOUR MOVE

Come *hate* it with us. Constructively.

★ Star it

✦ Fork it

✕ Break it

github.com/davide97g/pulse-hr

We're building what we'd want to use next. If you've got the same problem, we're listening.
