HR software for people who *hate*. HR software

Your HRIS is *slow*.

Your manager can only see their own team. Time entry lives in one app, the project lives in another. The same eight hours get logged twice. **Nobody trusts either number.**

You pay for all of this.
You hate all of this.

— every services firm, every Friday afternoon

To see what they do, you have to *book a demo.*

Apparently "can I see the product before I pay for it" is a premium feature.

> *We disagreed so hard we made not-doing-that a brand value.*

$ grep -r "book a demo" pulsehr.it → 0 results

You could just *read* the source.

~/PULSE-HR — 58 S

```
$ git clone github.com/davide97g/pulse-hr
$ cd pulse-hr && bun install && bun run dev
# → localhost:5173. done.
```

≈ 58 seconds · on a 2020 MacBook · honest number

01

The whole product. On .

FSL-1.1-MIT today. Converts to plain MIT after two years. Automatic, non-negotiable.

Read every line. Run it on your own box. Fork it if we let you down.

02

Nothing behind a *sales call*.

Roadmap public. Changelog public. Prices public. **Screw-ups public.**

If you'd need to "talk to someone" to figure out if we'd work for you — that's on us. We'd rather just write it down.

03

Your data.
Your infra.
Your *exit*.

Self-host on Docker, Helm or Terraform. Export everything in a clean format, any time, without asking.

Leaving Pulse is the easiest thing it does. That's on purpose.

04

Built by the *haters*.

Two devs in Milan. **No BDRs. No "customer success team". No product managers.**

Just commits, a public roadmap, and pull requests from people who — turns out — also hate their HR software.

Come *hate* it with us. Constructively.

★ Star it

✦ Fork it

✕ Break it

github.com/davide97g/pulse-hr

We're building what we'd want to use next. If you've got the same problem, we're listening.
